
1 News: December, 2007

Merry Christmas,

This is an exciting month for DataCan. Our first batch of Piezo Memory tools went into calibration last week. The tools are operating at 180C and the pressure data looks extremely stable. We've completed an O-Ring Selection Guide, and are currently working on the final touches of the Piezo Memory Tool Manual.

Both of these white papers can be found in our "downloads" tab.
