# 1 News: May, 2008

## **Testing:**

Our long term tool testing continues. We have four piezo tools under testing, after 386 hours at 150°C they are still working at 150°C. Two of the tools were powered using DataCan 65°C “C” cell battery packs, two others were powered via a power supply.

Our 177°C Quartz tool has been qualified to run in Libya. The operator noticed a significant improvement in transient response, as well as easy to use software.

We’ve also continued to test our instant close shut in tool. Successful static and dynamic tests were recently completed to 7,000psi differential.

## **OTC 2008:**

The 2008 Off Shore Technology Conference was a huge success. We’d like to thank everyone who stopped by and showed interest in our products and our company. We can’t wait till next year.

## **Up coming:**

We were able to secure space at the Global Petroleum Show in Calgary. The conference runs from the 10<sup>th</sup> to 12<sup>th</sup> of June. Our booth, number 6273, is located in the outdoor tent. We’ll be showcasing all of our products and technologies. If you need any passes to the event, contact us via e-mail at [eventpasses@datacan.ca](mailto:eventpasses@datacan.ca)

We hope to see you there.
